

d Benchmark metrics, assessing the similarity in:

Cell ordering: Correlation

Correlation of shortest path distances between cells

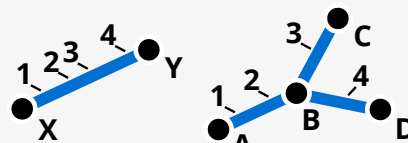

Correlation of distances

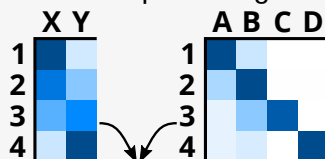

Cell neighbourhood: RF MSE

Predict cell positions using a regression model

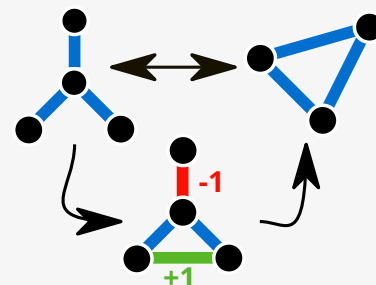

Milestone percentages

Train regression model to predict X and Y from A, B, C, D and calculate out of bag MSE

Topology: Edge flip

How many edges need to be added or removed in order to transform one topology into another?

$$\text{Edge flip score} = \frac{1 + 1}{6}$$
